

## PHASE 8 – PROJECT DEMONSTRATION

### Demonstration Objective

To demonstrate how ServiceNow Flow Designer automatically classifies and routes a service ticket.

### Demonstration Steps

Step 1: Log in to the ServiceNow instance using an authorized account.

Step 2: Open the Ticket/Incident module.

Step 3: Create a new sample ticket.

Step 4: Enter the short description and detailed description.

Step 5: Submit the ticket.

Step 6: The Flow Designer trigger starts automatically.

Step 7: The flow checks the ticket information against the predefined conditions.

Step 8: The system identifies the appropriate ticket classification.

Step 9: The ticket category/classification and other required fields are automatically updated.

Step 10: The ticket is assigned to the appropriate assignment group.

Step 11: Display the flow execution details or activity history.

Step 12: Create another sample ticket to demonstrate a different classification path.

### Expected Demonstration Result

The system should automatically classify the ticket and route it according to the configured rules without requiring manual classification for the demonstrated cases.

### Conclusion

The demonstration shows how ServiceNow Flow Designer can automate repetitive ticket classification and routing activities, reducing manual effort and improving the efficiency of ticket management.
